

JUKE BOX - VERSION 1.5

Juke Box Version 1.5 offers three new features:

- Support of additional wave forms
- Multiple selections
- Bank file for instrument sounds.

The wave form is a parameter used to create an instrument sound. Juke Box V1.5 supports the extra wave forms and can play songs which use instruments that contain these wave forms.

Previously, the Juke Box allowed you to select only one song at a time. You may now choose several at one time and your selections will be played back in the order in which they were chosen. Please refer to the README.TXT file on your diskette for details.

Previously, the parameters which define a particular instrument sound were stored in small, individual instrument (.INS) files. These instrument files have now been bundled together to form one large bank file. Details on how this effects Juke Box are found in the README.TXT file.
