

IBM PCjr Internal Modem Installation and Operating Instructions

If your IBM PCjr has not been set up at this time, do so before installing this option.

If you have a diskette drive option to install, do so before installing this option.

This carton contains the following:

- IBM PCjr Internal Modem
- Modem Cable

If any items are missing or damaged, notify your place of purchase.

Installation Requirements

Your IBM PCjr must be set up before you can install this option.

Tools Required

- Medium-size, flat-blade screwdriver

Installation Instructions

1 Your IBM PCjr Internal Modem is registered with the Federal Communications Commission. The FCC states:

- It is against the law to connect your modem to a party line or pay telephone.
- If your IBM Modem needs repairs, the repairs must be made by an IBM authorized dealer.

2 Before you install your modem you must contact your local telephone company. You will need to tell the telephone company:

- The telephone number that the modem is connected to.
- The FCC registration number, which is AU492X-11149-DM-E.
- The ringer equivalence, which is 0.8B
- The Phone Line Interface, which is
 - Direct-Connect Modular plug mates with standard telephone jacks (USOC-RJ11C, and RJ11W).

- 3 Turn your IBM PCjr power off.
- 4 Turn all external option power to off (printer, TV, cassette, etc.).
- 5 Unplug the power cords for the IBM PCjr and all options from the wall outlets.
- 6 Turn your IBM PCjr so the rear is toward you.

CAUTION

Serious shock hazards exist within the covers of the IBM PCjr. Do not open these covers unless you have unplugged your IBM PCjr power cord from the wall outlet.

Warning: After turning your IBM PCjr power to off, allow 5 minutes for cooling to take place before removing the cover.

- 7** Place a flat-blade screwdriver into the slots and twist.
- 8** Remove the top cover by lifting it up and away from the front of the IBM PCjr.

9 Turn your IBM PCjr so the front is toward you.

10 Position the IBM PCjr Internal Modem so that its system connector and the two pin connector are directly above its system slot and two pin plug. Press it firmly in place, be sure that the rear of the card goes into the rear guide.

- 11** Replace the top cover by placing it on the IBM PCjr. Slide it forward until the top cover and front of the IBM PCjr fit together. Press down on the rear of the top cover until it snaps into place.

- 12** Plug one end of the IBM PCjr Internal Modem cable into the connector marked with a "M". The other end of this cable attaches to a standard telephone outlet.

- 13** Plug the IBM PCjr and all option power cords into wall outlets.

Important:

Insert these option instructions into Section 5 of the *Guide to Operations* manual.

- 14** If you have any other options to install, install them at this time.

If you do not have any other options to install, continue normal operation.

Modem Commands for the IBM PCjr Internal Modem are described on the following pages.

Modem Commands

Note: Knowledge of BASIC programming and computer communications over telephone lines is necessary to understand and use the modem commands. For more information on the modem commands see the IBM PCjr Technical Reference Manual.

Command Format

All commands sent to the modem must be in the following format.

[Ctrl-N] command [space] argument [Enter]

Ctrl-N is the control key plus the command character "N".

command is the actual modem command. Any of the commands listed later may be used.

space is required between the command and the argument.

argument is a variable that modifies a command. It can be any of the valid characters defined in item 3.

Pressing *Enter* causes the modem to perform the command.

Commands

In the command descriptions that follow, these conventions are observed:

1. The commands are expressed in capital letters; however, the modem recognizes only the first letter of the command.
2. All command lines must begin with a command character. The default command character is "N".
3. You must supply any arguments that are shown in lowercase letters. Except as noted in specific commands, valid characters for arguments are defined as:
 - a. m: ASCII decimal digits 0-9, *, #, I, P, and W.
 - b. n: ASCII hexadecimal digits 0 through F.
 - c. o: ASCII decimal digits 0 through 9.
 - d. p: Any ASCII character.

All arguments are examined for validity. If extra characters appear in an argument, the extra characters will be ignored. If the argument, is invalid a question mark is returned.

4. An ellipse (...) indicates an item may be repeated.
5. The following notes should be considered when preparing commands:
 - a. A modem command can occur anywhere in the data stream as long as it is formatted correctly.

- b. ENTER indicates the end of the command string and the command should be sent.
- c. The command string, including ENTER, is not sent over the telephone line.
- d. Multiple commands can be given on the same line as long as they are separated by commas.

Command Format

The modem commands used with the IBM PC_{jr} are as follows:

Format ANSWER or A

Purpose Forces modem to go off-hook and into the Answer mode.

Format BREAK n or B n

Purpose To send a space or break character for a multiple of n times 100 milliseconds.

Format COUNT n or C n

Purpose Modem will answer an incoming call after n rings. When dialing, the modem will end the call after n plus 3 ringback tones.

Format DIAL m...m or D m...m

Can be a string up to 33 digits and characters.

P 10 second delay to search for the dial tone. (default for first character in string.)

W 5 second wait before continuing to dial. (required to dial an access code for an outside line.)

I After a P or W causes the next digits to be rotary-dialed (use of pulses) otherwise the digits are tone dialed (use of tones).

Purpose Causes the modem to dial.

Format FORMAT n or F n

where "N" is one of the following:

N	Parity	Data Length (Bits)	Stop Bit
0	Mark	7	1
1	Space	7	1
2	Odd	7	1
3	Even	7	1
4	None	8	1
5-7	Reserved		

Default is Even

Note: If programming in BASIC this command must be used in addition to specifying the same parity and data length in the OPEN statement.

Purpose Changes parity and data length.

Format HANGUP or H

Purpose Forces modem on-hook (deactivated).

Format INITIALIZE or I

Purpose Places the modem in the power-up default state. This command takes 10 seconds to execute and is the same as a cold start (power-up). An OK is not returned after execution, and the integrity-test code of the QUERY command is set.

Format LONG RESPONSE o or L o

where O is one of the following:

O	Response
0	Verbose or long
1	Terse or short (hexadecimal:

Default is 0

Purpose Modifies message feedback. Information is posted in the status area.

Format MODEM or M

Purpose Forces the modem into the data state where the carrier is placed on the line.

Format NEW p or N p

Purpose Changes the command character to p.

Format ORIGINATE or O

Purpose Forces the modem to off-hook and to the Originate mode.

Format PICKUP or P

Purpose Forces the modem off-hook and in voice state.

Format QUERY or Q

Purpose Request status information from the modem.

Possible characters returned are:

Characters	Description
H0 or H1	Hook status: H0 is on-hook, H1 is off-hook
S0 to SF	Current setting of COUNT command (in hexadecimal).
B	Line busy
D	Line dead: no dial tone found, or no-ring or no-busy timeout after dialing.
L	Successful dial and connection.
N	Dial not recorded: dial tone present after dialing
T0	Integrity test passed
T1	Integrity test failed

The first group of characters is always returned for a QUERY command. The second group is returned only after a dialing sequence has started or a change has

occurred in the dialing status. The third group of characters are returned when an INITIALIZE command has occurred.

Format RETRY or R

Purpose When placed after a DIAL command, causes the modem to redial up to 10 times at a rate of one every 40 seconds, if busy is detected.

Format SPEED o or S o

where SPEED is one of the following:

"0"	Speed in bps
0	110
1	300
2	Other (Reserved)

Default is 1

Note: If programming in BASIC, this command must be used in addition to specifying the same BPS rate in the OPEN statement.

Purpose To set the bps (bits per second) rate.

Format TRANSPARENT n...n or T n...n

Purpose Places the modem in the transparent mode. The modem does not look for command sequences, but instead sends every character it receives.

Format VOICE or V

- Purpose** Forces the modem to the voice state. No tones or carriers are placed or looked for on the telephone line.
- Format** WAIT or W
- Purpose** Puts the modem in the WAIT state. No actions, including automatic answering, are taken by the modem until the next command is received from the host.
- Format** XMIT m...m or X m...m
- Purpose** Instructs the modem to send the Dual Tone Modulated Frequency (DTMF) tone pairs found in the argument string. This is valid only in the voice state.

Format ZTEST o _or Z o

where "o" is one of the following:

"o"	Test
0	Hardware Integrity Test
1	Analog Loopback Test

Purpose Places the modem in the test mode specified by the argument.
