CMOS 64K BIT LOW POWER SRAM

8K Words x 8 Bits CMOS Static RAM with Low Power and Data Retention

The Fujitsu MB8464A is a 8,192 words x 8 bits static random access memory fabricated with a CMOS silicon gate process. The memory uses asynchronous circuitry and may be maintained in any state for an indefinite period of time. All pins are TTL compatible and a single +5 V power supply is required.

The MB8464A has low power dissipation, low cost, and high performance, and it is ideally suited for use in microprocessor systems and other applications where fast access time and ease of use are required.

Absolute Maximum Ratings (See Note)

Rating		Symbol	Value	Unit
Supply Voltage		V_{CC}	−0.5 to +7.0	V
Input Voltage		V_{IN}	−0.5* to V_{CC} +0.5	V
Output Voltage		V_{OUT}	−0.5 to V_{CC} +0.5	V
Temperature Under Bias		T_{BIAS}	−10 to +85	°C

	Plastic		−45 to +125	

* −2.0 V for pulse width less than 20 ns.

Note: Permanent device damage may occur if absolute maximum ratings are exceeded. Functional operation should be restricted to the conditions as detailed in the operation sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit.
