

## 4-PORT WAN MODULE RELEASE NOTES

The 4-Port WAN module (Assembly No. 06-0229-006 Rev. AA/3C6047A, Rev. AA) when installed in the NETBuilder II bridge/router must run with a compatible version of Enterprise OS software.

Included with this 4-Port WAN module is a software CD-ROM (Part number 83-1345-000). This module is compatible with the Enterprise OS software version 11.3 or higher.

*The Enterprise OS software CD-ROM contains patches for **non-encrypted software only**. If you have Enterprise OS version 11.2 or 11.1 encrypted software, see *Encrypted Software Instructions* in this release notes for information about acquiring the required patches.*

If you install this 4-Port WAN module in a NETBuilder II bridge/router that is running Enterprise OS software version 11.2 or 11.1, you must load the Enterprise OS software patch version with a version number that is equal to or higher than that shown in column 1 in Table 1. Be sure to load patch versions for both the DPE system software (BOOT.29K) and the 4-Port WAN module software (4PORTWAN.860).

**Table 1** 4-Port WAN Module Firmware Requirements

Enterprise OS Software Patch Version	IOFW_UDP Firmware Update Utility Version	Firmware Version
11.1.0.42	11.1.0.01	1.2.0.00
11.2.0.12	11.2.0.00	1.3.0.00

If you install the 4-Port WAN module and are also upgrading your bridge/router to release 11.1 or 11.2 from an earlier release, you should use the IOFW\_UPD Firmware utility version shown in column 2 in Table 1 to upgrade the firmware of the I/O modules in your system.

The 4-Port WAN module CD-ROM includes the Enterprise OS software patches for Enterprise OS versions 11.2 and 11.1 that you need to load to ensure that your module is compatible with the Enterprise OS software version 11.3 or higher.

You do not need to do a firmware upgrade, unless there is a system upgrade (for example, 10.3 to 11.2) as well. If you do a firmware upgrade with the wrong version upgrade utility, the system with the 4-Port WAN module (Assembly No. 06-0229-006 Rev. AA) may not boot properly.

### Encrypted Software Instructions

If you have a version of Enterprise OS that supports encryption, do the following:

- Make a photo copy of the front of the software CD-ROM, purchase order, or flash card indicating the software version and the package identifier.
- Mail or FAX this copy to 3Com Marketing support in the WAN Access Products division at the following address:

Marketing Administration for  
The NETBuilder II Product Manager  
3Com Corporation  
5400 Bayfront Plaza, M/S 2218  
Santa Clara, CA 95052  
Fax 408-326-5002  
Phone 408-326-8618
