

EC²*low profile***T²L****COMPATIBLE****SQUARE WAVE
GENERATOR MODULE**

- T²L input and output
- Output wavetrain can be started in sync with random events
- 14-pin DIP package (.250 high)
- Available in frequencies from 2 Mhz to 100 Mhz
- Output frequencies controlled to within $\pm 2\%$
- 10 T²L fan-out capacity

design notes

The "DIP Series" Square Wave Generator Modules developed by Engineered Components Company have been designed to provide a T²L level square wave output at frequencies from 2 Mhz to 100 Mhz. These generators are both keyable and synchronizable, producing a continuous output train as long as a zero (low) is maintained at the enable input. As long as the enable input is a "1" (high), the output will be a constant "1" (high). Whenever the enable input goes low, the output wavetrain will start in the same sequence with the first low appearing one-half cycle after trigger, and the first positive edge occurring after the period of one cycle. (Note: The output buffer will add one

propagation delay to all times). This feature allows the initiation of a timing wavetrain with the origin in synchronization with another event.

These Square Wave Generator Modules are of hybrid construction utilizing the proven technologies of active integrated circuitry and of passive networks utilizing capacitive inductive and resistive elements. The ICs utilized in these modules are burned-in to Level B of MIL-STD-883 to ensure a high MTBF. The MTBF on these modules, when calculated per MIL-HDBK-217 for a 50°C ground fixed environment, is in excess of 3 million hours.

The TTL SWGM is offered in thirty (30) different frequencies from 2 Mhz to 100 Mhz. Output frequencies are controlled to within $\pm 2\%$ and have a temperature coefficient of less than -500 ppm/°C over the operating temperature range of 0 to +70°C.

These "DIP Series" modules are packaged in a 14-pin DIP housing, molded of flame-proof Diallyl Phthalate per MIL-M-14, type SDG-F, and are fully encapsulated in epoxy resin. Flat metal leads meet the solderability requirements of MIL-STD-202, Method 208. Leads provide positive stand off from the printed circuit board to permit solder-fillet formation and flush cleaning of solder-flux residues for improved reliability.

DESIGN NOTES (continued)

Marking consists of manufacturer's name, logo (EC²), part number, terminal identification and date code of manufacture. All marking is applied by silk screen process using white epoxy paint in accordance with MIL-STD-130, to meet the permanency of identification required by MIL-STD-202, Method 215.

MECHANICAL DETAIL IS SHOWN BELOW

TEST CONDITIONS

1. All measurements are made at 25°C.
2. V_{cc} supply voltage is maintained at 5.0V DC.
3. All units are tested using a Schottky toggle-type gate driving the input and one Schottky T²L load at the output.

OPERATING SPECIFICATIONS

- * V_{cc} supply voltage: 4.75 to 5.25V DC
- V_{cc} supply current:
 - TTLSWGM-2 36ma typical
 - TTLSWGM-100 60ma typical
 (Current increases with operating frequency)

Logic 1 input:

- Voltage 2V min.; 5.5V max.
- Current 2.4V = 50ua max.
- 5.5V = 1ma max.

Logic 0 input:

- Voltage8V max.
- Current -2ma max.

Logic 1 Voltage out: 2.4V min.

Logic 0 Voltage out:4V max.

Operating temperature range: 0 to 70°C.

Storage temperature: -55 to +125°C.

* Output frequency will increase or decrease less than 1% for a respective increase or decrease of 5% in supply voltage.
