

Due to the number of expansion slots blocked by this device in an AT computer, it is not recommended for use in a Tandy 3000 or 4000 series computer. The adapter will not work in a Tandy 3000 NL.

The best choice of Adapter for the 3000/4000 series computers would be the 25-4121.

The Tandy 1000 TL/2 and TL/3 can not use the 25-1088 Hard Drive Adapter.

The Hard Drive Adapter Kit enables you to install an XT/IDE SmartDrive in your computer without using a drive bay. With this kit, the SmartDrive plugs directly into an expansion slot on the main logic board. The extra drive bay can then be used for another half-height drive, or a full-height drive in a computer with adjoining half-height drive, or a full-height slots.

The Hard Drive Adapter Kit includes:

- * a drive mounting frame with a SmartDrive interface board, a power cable, and a data cable.

- * screws:

- 1 small round-head and 2 large round-head
 - 4 small flat-head and 6 large flat-head
 - 4 hexagonal extenders

- * tail brackets for:

- Tandy 3000/4000 series computers
 - SL/TL series computers
 - SX/TX series computers

To use this kit, you need the following:

- * Tandy 20MB XT or 40MB XT/IDE SmartDrive

- * Tandy 1000, 1000A, 1000SX, 1000SL, 1000SL/2, 1000TX, 1000TL, 3000, 3000HL, 4000, 4000LX or other PC compatibles.

- * MS-DOS 3.0 or later

CAUTION: You can not install this kit in a computer that contains an ST412 hard drive system or another enabled IDE controller. Damage to hard drive data will result.
